

# FASTENER GUIDE

**BUILDEX®**

# INTRODUCTION

For over a century, Buildex® has led the fastening industry with breakthrough technologies and innovative solutions that set new benchmarks. Our legacy, built on a hundred years of expertise, ensures superior performance and reliability for a diverse array of construction applications.

We are dedicated to excellence, with each fastener reflecting our commitment to providing builders with the most dependable and robust performance from the outset. Trust Buildex® to enhance your builds with unparalleled trade-grade quality and enduring innovation that has stood the test of time.

## OUR PARTNERSHIPS

Buildex® is proud to collaborate with leading industry associations and partners, reinforcing our commitment to quality and innovation in fastening solutions.

**Disclaimer:** The information provided in this brochure is subject to change. For the most up-to-date details, please contact your sales representative.

# DEFINING OUR FASTENERS

## ROOFZIPS®

A Buildex® innovation, RoofZIPS® have transformed the roofing industry. This versatile screw offers unparalleled performance, ensuring a superior seal that sets the industry benchmark.

## METAL TEKS®

Since the introduction of the original TEKS®, Buildex® has been at the forefront of self-drilling metal screw technology, establishing a reputation synonymous with performance, durability and quality.

## CLIMASEAL®

CLIMASEAL® coatings exemplify Buildex® innovation leadership, surpassing standard requirements by resisting environmental elements like salt, wind, moisture, and UV rays, ensuring that your fasteners never become the weakest link.

## CYCLONIC ASSEMBLIES

Backed by over fifty years of design and installation expertise, Buildex® RoofLOK® is engineered to secure roofing sheets under extreme cyclonic conditions. Tested at James Cook University's Cyclone Structural Testing Station, it is suitable for Category 5 cyclones.

# HOW TO CHOOSE THE RIGHT FASTENER

Choosing the right fastener is pivotal for your construction and installation needs. Whether you're securing a roof, building a deck or setting up outdoor structures, we want to ensure you are selecting the right screw for your project.

## CONSIDERATIONS

### ① APPLICATION PURPOSE

Evaluate what the fastener will do. Whether it's structural support or weather resistance, the function determines the type of fastener required.

### ② ENVIRONMENTAL CONDITIONS

Consider the location: indoor environments have less stringent requirements compared to outdoor or extreme conditions. Coastal areas or regions with high humidity demand fasteners with superior corrosion resistance, such as 316 grade stainless steel to combat saltwater corrosion.

### ③ APPLICATION SUBSTRATE

Material selection impacts cost, strength, and corrosion resistance.

#### TREATED PINE

Climacoat® corrosion resistance is optimised for highly corrosive treated pine timber, offering superior performance compared to galvanised options.

#### TIMBER & METAL

CyclonicZIPS® are designed for securing roofing to timber or metal battens in high wind conditions, while RoofZIPS® are ideal for fixing roofing and cladding in residential setups.

#### METAL

The Metal TEKS® range includes options for cladding and high-load applications, such as Metal TEKS® with HiGrip® for securing metal sheets. The Series 500® is ideal for fixing steel to steel up to 12mm thick, offering self-drilling and tapping capabilities in one simple installation process.

#### ④ FASTENER TYPE

Buildex® offers a diverse range of screws, each engineered with specialised head types such as countersunk, flat, or washer head to optimise performance for various applications, whether seeking a flush finish or maximum hold-down.

The drive types are tailored to enhance functional, aesthetic, and performance qualities. Star drives are designed to maximise torque transfer while minimising cam-out for a sleek finish, while hex head screws provide a secure driver fit for reliable placement during high-volume installations.

Thread designs are finely tuned for optimal retention in various substrates, featuring coarse threads with a lower thread per inch (TPI) count for softwoods, and conversely, very fine threads with a high TPI designed for tapping into steel.

Additionally, the drill point design is optimised for peak performance in specific applications, from drilling into steel to T17 for soft timbers. RoofZIPS® represent the versatility in the range, suitable for both timber and light gauge steel.

#### ⑤ SELECT A COATING BASED ON CORROSION NEEDS

##### CLIMASEAL®

Our Climaseal® coatings range from Climaseal® 3, designed for moderate environmental exposure, to Climaseal® 5, which offers exceptional resistance in the most severe and demanding climatic conditions. Climaseal® 4 is well-suited for a broad spectrum of installations where the screw faces the demanding corrosive conditions across Australia and New Zealand.

##### STAINLESS STEEL GRADES

In decking, Stainless Steel 304 offers superior corrosion resistance for a variety of applications in most bay-side suburbs and inland.

Stainless Steel 316 is a marine-grade material that provides maximum corrosion resistance, making it ideal for harsh and demanding environments such as spray-exposed coastal installations and poolside areas.

##### ZINC ALLOY

Zinc alloy fasteners offer general purpose Class 3 corrosion protection for parts of a build that are not exposed to the elements.

##### CLIMACOAT®

Climacoat® is a proprietary finish that protects against the highly corrosive chemicals in typical timber treatments, such as ACQ. When standard galvanised screws in treated timbers give up early in their lifecycle, Climacoat® screws are still going strong.

##### ZINC PLATED

Zinc plated fasteners provide standard-level corrosion resistance, making them suitable for interior installations.

## ⑥ SIZE

Selecting the appropriate size of fastener is crucial to meet the structural demands of your project. Essentially, the depth of embedment into the substrate significantly influences the overall performance of a screw. For instance, when using roofing or decking screws, Buildex® recommends a minimum embedment of 25mm into timber to ensure optimal hold-down of the material being fixed.

By thoroughly assessing these factors, you can ensure that your choice of fasteners not only meets the specific requirements of your project but also boosts its durability and longevity. Choosing the right fastener is vital for achieving robust, enduring connections that withstand the test of time.

## Screw Gauge for Decking & Timber Projects

Standard Softwood or Hardwood Decking Timbers

Wide Softwood or Hardwood Decking Timbers (140mm)

General Timber Frame Construction

Oversized Hardwood Decking Timbers

10G

12G

16G

## Screw Length

To ensure proper timber-to-timber embedment, the embedment should be at least twice the thickness of the material being fastened. For example, if fastening 20mm decking timbers, a 40mm embedment into the decking frame is required.

In roofing and cladding applications, a minimum of 25mm embedment is recommended, though it's important to consult the cladding manufacturer's guidelines.

## Building code compliance

Selecting fasteners that comply with local building codes is crucial, as these codes set the specifications for load capacity, material compatibility, corrosion resistance, and installation methods. Buildex® fasteners are expertly engineered to meet these regulations, ensuring your projects are not only durable and safe but also legally compliant.

Whether tackling high-corrosion environments that require Climaseal® coatings or reinforcing structures in cyclone-prone areas with RoofLOK®, our products are crafted to adhere to stringent national and international standards. With Buildex®, you get reliable solutions tailored to every construction challenge, ensuring your projects fulfill all necessary regulatory requirements.

# WHY CORROSION RESISTANCE MATTERS

Australia and New Zealand experience extreme weather conditions, ranging from harsh coastal environments to dry and hot inland areas. These environmental factors can significantly impact the performance of your fasteners over

time. Understanding the importance of corrosion resistance in fasteners is crucial for protecting your projects from environmental damage, ensuring longevity, and maintaining structural integrity.

## Environmental impacts

### COASTAL

In coastal regions, the saline environment aggressively accelerates the corrosion process. Buildex® offers a range of Climaseal® coatings, each designed to withstand varying degrees of corrosive environments as outlined in international standards ISO 9223-2012 and AS4312-2019. Climaseal® 5, for example, provides double the corrosion resistance of Climaseal® 4, making it ideal for the most severe conditions, including Category 5 coastal areas.

### CYCLONE-PRONE AREAS

The choice of fasteners can critically impact the structural survival of buildings in cyclonic conditions. Buildex® RoofLok® Cyclonic Fasteners are engineered for extreme wind loads, featuring a dual washer system to enhance

roof-holding capabilities and prevent water ingress. Using Climaseal® 5 or Climaseal® 4 coated fasteners in these areas ensures long-term performance against the corrosive effects of salt-laden winds, a common cause of cladding system failures during cyclones.

### HIGH WINDS

Buildex® ensures that all roofing profiles are tested under cyclonic conditions at James Cook University. RoofLok® has received Deemed to Comply Approval from the Northern Territory Building Advisory Committee, affirming its capacity to secure roofing effectively under extreme cyclonic conditions.

## Considerations when you build

Choosing the right corrosion-resistant fastener is not only a safety measure but also a cost-effective strategy. Investing in quality fasteners like those with Climaseal® coatings or stainless steel grades significantly reduces the likelihood of premature repairs and replacements due to rust and corrosion.

### MATERIAL SPECIFIC RECOMMENDATIONS (TIMBER)

Stainless Steel 304 is suitable for general applications, offering good corrosion resistance.

Stainless Steel 316 is strongly recommended for severe industrial or marine environments where higher corrosion resistance is essential.

Climacoat® provides excellent protection against humidity, abrasion, and impacts, maintaining both functional integrity and aesthetic appearance.

### CLIMASEAL® FEATURES AND BENEFITS (ROOFING & CLADDING)

Climaseal® 3 is suitable for Category 3 environments, providing comparatively more robust corrosion protection than standard Class 3 fasteners.

Climaseal® 5 offers exceptional resistance in the most severe and demanding climatic conditions.

Climaseal® 4 provides enhanced performance for Category 4 and 3 environments.

## Why it matters

Buildex® has pioneered the use of real-world outdoor exposure testing since 1994, continually enhancing the durability and performance of our coatings. The Climaseal® process is proven to withstand Australia and New Zealand's harsh environments, providing your projects with the protection they need against the costly and damaging

effects of corrosion.

By choosing the right fasteners with appropriate corrosion resistance, you protect your investment, ensure safety, and maintain the aesthetic integrity of your constructions, proving that the smallest details can make the biggest difference.

## Corrosion zones

**CATEGORY 5** Very severe marine, up to 400m from the ocean

**CATEGORY 4** Severe marine, between 400m and 1km from the ocean

**CATEGORY 3** Mild and moderate marine, between 1km and 50km from the ocean

**CATEGORY 2** Light industrial urban

# OUR COMMITMENT TO SUSTAINABILITY

At Buildex®, we are committed to minimising the environmental impact in the manufacture and supply of our products. Operating across Australasia, we provide the building industry with high-quality fasteners and fittings, while continuously improving our practices to protect the environment.

## Australian Packaging Covenant

Buildex® is a proud signatory of the Australian Packaging Covenant (APCO), a pioneering initiative aimed at enhancing packaging sustainability. This covenant represents a commitment among businesses, government, and the community to foster a culture of sustainable packaging practices. By adhering to APCO packaging standards, Buildex® pledges to:

- Design packaging solutions that are more resource-efficient and recyclable.
- Enhance the recovery and recycling of packaging materials from both household and commercial sources.
- Actively reduce the incidence and impacts of litter.

Currently, Buildex® stands alongside approximately 900 organisations that are committed to these principles under APCO, working collaboratively to address packaging sustainability issues across Australasia.

## The Australasian Recycling Label

Buildex® proudly holds the Australasian Recycling Label (ARL) certification, demonstrating our dedication to sustainable packaging practices. This initiative, part of Australia's National Waste Policy Action Plan and the National Plastics Plan, highlights our commitment to

ARL's goal of enhancing consumer recycling awareness. Through ARL certification, Buildex® actively contributes to making all packaging clearly labelled and more recyclable, supporting the broader aim to ensure 100% of packaging is reusable, recyclable, or compostable.

# CASE STUDY

## Transforming deck installation with Buildex® Self-Drilling Decking Screws

**① CHALLENGE:** Traditional deck laying often leads to common frustrations like split boards, time-consuming pre-drilling, and stripped screw heads. These issues can turn even the simplest projects into lengthy ordeals.

**② SOLUTION:** Builder Darren Brown discovered the efficiency of Buildex® Self-Drilling Decking Screws during a project involving red ironbark - one of the densest hardwoods. He installed a 36m<sup>2</sup> deck in just a day and a half, without splitting a single board. "These screws drastically reduce the usual problems of splitting and breakout, halving the installation time since there's no need for pre-drilling or pre-countersinking," says Darren.

**③ RESULTS:** Buildex® screws not only saved time but also improved the overall quality and durability of the deck. "The difference in the finish and the speed of installation is remarkable. These screws allow me to work twice as fast compared to traditional screws and leave a neat, professional finish," Darren says.

Available in 10G x 55mm and 10G x 65mm, the screws come in packs of 50 or boxes of 500. Each package includes a T20 star driver bit, perfect for use with an impact driver for best results.

These screws are versatile for other applications like timber cladding, pergolas, and custom outdoor furniture, providing durability, speed, and a superior finish in all projects.

Choose Buildex® Self-Drilling Decking Screws for your next decking project to experience unmatched productivity and a flawless finish. Elevate your craftsmanship with Buildex® - where innovation meets durability.

### Why Buildex® self-drilling decking screws work:

**Trim Head:** Reduces surface stress, seamlessly blending with the decking for an aesthetically pleasing finish.

**Cutting Nibs:** Prepares a perfect recess for the screw head, ensuring a flush, clean finish without additional pre-countersinking.

**Coarse Cutting Thread:** Cuts into timber delicately, minimising potential splits while enhancing pull-down strength.

**Quick-Drive Point:** Ensures precise positioning and immediate grip, significantly reducing warping and preventing deck boards from splitting.

# SERIES 500®

## THE ULTIMATE FASTENER FOR THICK STEEL

Buildex® Series 500® Screws are used for metal-to-metal fixing of thick steel purlins and hot rolled steel. They are widely used in the HVAC, plumbing, and steel fabrication industries where thick steel sections are common. This all-purpose fastener has a drill capacity of up to 12mm.

### ① VERSATILE FASTENER

- Ideal for fixing into thick steel.

### ② TEKS® POINT

- Ensures fast and easy application into steel up to 12mm thick.

### ③ HIGH PULL-OUT STRENGTH

- Ensures your joint can withstand extreme weather factors.

### ④ CORROSION PROTECTION

- Available in Climaseal® 3 for superior corrosion resistance.

## FASTER INSTALLATION. MAXIMUM PULLOUT & STRENGTH.

# METAL

Buildex® offers a comprehensive range of fasteners designed for securing metal components in various industrial applications. Whether you're working with thick steel sections, HVAC systems, or steel frame housing, our products are engineered to provide maximum strength, durability, and ease of installation.

# ROOFZIPS®

## THE INDUSTRY RECOGNISED FASTENER FOR METAL ROOFING

**Buildex® RoofZips®**  
are a versatile  
solution for fastening  
metal roofing to light  
metal battens and  
softwood timber  
battens, making it  
ideal for domestic  
applications.

### ① FAST & EASY INSTALLATION

- Patented RoofZips® point design simplifies installation, saving you time and money.

### ② HIGH PULL-OUT STRENGTH

- Ensures your joint can withstand extreme weather factors.

### ③ CORROSION PROTECTION

- Climaseal® 4 for superior protection.

### ④ UNDER-ROOF CORROSION PROTECTION

- Shankguard® prevents scratching and scouring of the fastener shank during installation.

### ⑤ HIGRIP®

- Grips to the roof sheeting to create a positive join, preventing water entry and over-drilling.

## HIGH DRILLING PERFORMANCE, EVERY TIME.

# ROOFING

Buildex® provides a wide range of high-quality fasteners specifically designed to meet the demands of various roofing applications. From temperate to cyclonic conditions, our products are engineered to ensure strong, secure, and long-lasting fixes for your roofing projects.

# RAPIDDRIVE® Bugle Batten Screws

**Buildex® RapidDrive® bugle batten screws offer a superior solution for fastening, providing faster and easier installation with a sharper design cut and a fast bite point that reduces timber splitting, even in close-to-edge applications, resulting in less re-work.**

## ① SELF DRILL

- W-Cut Thread delivers a faster drive into timber for quick and easy installation.
- Aggressive thread increases pull-down speed and strength.
- Serrated cutting ribs effectively remove timber fibres for cleaner countersinking.
- Clearing thread reduces driving torque at the final stage of installation.

## ② DRIVE

- One-handed operation for easy installation.
- T30 star drive recess with precision fit for positive bit engagement.
- Reduces bit wobble and is more resistant to cam-out.
- Improves productivity for all tradies.

## ③ COUNTERSINK

- Trim head minimises pressure on the board when embedding.
- Enhances the overall appearance of decking with a clean flush finish.

## FASTER, STRONGER & EASIER TO INSTALL

# BUGLE BATTENS

The Buildex® range of Bugle battens is designed for fast, efficient, and reliable installation across a wide range of timber projects. They're well-suited for structural and external applications where strength, speed, and durability are essential.

---

## RAPIDDRIVE BUGLE BATTEN SCREWS

05

## RapidDrive Bugle Batten Screws:

Engineered to enhance productivity on-site by offering speed and ease of use. These screws are twice as fast as standard bugle batten screws, featuring self-drilling functionality, a fast bite point for quick starts, and a T30 Star drive for single-handed operation.

# FibreTEKS®

## THE ULTIMATE FIX FOR FIBRE CEMENT SHEETING

Buildex® FibreTEKS® are designed for fitting non-compressed fibre cement sheeting to steel sections up to 1.2mm thick. Typical applications include eaves, fascias, wet areas, ceilings, interior walls, and cladding.

### ① UNDERHEAD CUTTER

- The countersunk rib head breaks up the cement sheet as the head embeds into the sheeting.

### ② LIP FEATURE

- Ensures correct embedment into the cement sheet for a flush finish.

### ③ TEK POINT DESIGN

- Allows quick and easy installation into metal with high pull-out strength.

### ④ CORROSION PROTECTION

- Available in Climaseal® 4 for superior corrosion resistance.

**QUICK & EASY INSTALLATION.  
TRADE GRADE QUALITY.**

# FIBRE CEMENT

Buildex® offers specialised fasteners designed for securely fixing fibre cement sheeting in a variety of applications. Our products ensure that your installations are strong, durable, and perfectly suited for both residential and commercial projects.

## Post & Anchor Screws:

Buildex® Post & Anchor Timber Construction Screws are designed to halve the installation time for timber posts and anchors. Rather than pre-drill and use a bolt and nut assembly, these screws can be installed in one go, safely locking the timber in place. Choose Zinc Alloy for general outdoor installation or Climacoat® for enhanced protection against the corrosive effects of treated timbers.
